

Methodologies – Column Manufacturer
Sky Countryman
Phenomenex

The USP regulates the level of residual solvents in pharmaceutical compounds under method 467. This course will discuss the requirements specified by the monograph and will then discuss ways in which the testing procedure may be optimized.

General topics will be:

- Injection techniques and their effect detection limits
- Column choices
- Detectors (FID, MS, etc)
- Single Method Separation of Class 1, 2, and 3 Solvents
