

Comprehensive Listing of Drugs in the USP Model Guidelines for Drugs Approved Through October 2004

This document provides a comprehensive listing of drugs categorized according to the USP Model Guidelines categories and classes. Although every effort has been made to include all eligible Part D, Food and Drug Administration (FDA)-approved drugs approved through October 2004 within each Therapeutic Category and Pharmacologic Class, the absence of a drug from this list does not specifically imply an intended exclusion. USP intends to modify and revise this comprehensive listing as part of its ongoing activity related to updating the Model Guidelines.

This listing appears in an excel formatted table that includes five columns. The first two columns – Therapeutic Category and Pharmacologic Class – comprise the USP Model Guidelines. The third column lists the Formulary Key Drug Types, which were provided to CMS separately in USP’s comments on the CMS Draft Guidance regarding the formulary review process. The remaining two columns comprise the comprehensive listing of drugs requested by CMS and are entitled Pharmaceutical Preparations and Salts/Esters. Each drug, drawn from the FDA’s Orange Book, has been listed according to its generic name.

USP understands that CMS intends to use the Formulary Key Drug Types as a check, assessing whether a formulary includes at least one drug from each item in the listing – or request justification for any exclusions. Because this will apply to all formularies, USP has included this listing here to facilitate CMS’ evaluation of formularies – regardless of the classification system that is used. Individual drugs are listed in the table based upon the most specifically listed Therapeutic Category, Pharmacologic Class or Formulary Key Drug Type.

The enclosed table offers a foundation for a more comprehensive database that could be of great benefit to CMS, Plans, and to the overall administration of the Medicare Prescription Drug Benefit. As part of its ongoing work to revise the Model Guidelines, USP proposes to enhance this table over time to include valuable clinical and economic data such as:

- International Classification of Diseases, Ninth Revision Codes (ICD-9 Codes)
- Off-label indications
- Dosage forms
- Route of administration
- Pharmacokinetics
- Patient population-based preferred drugs lists
- The National Drug Code Directory Codes (NDC Codes)
- Average pricing guides
- And more.

This information could be utilized for individual plan and formulary analysis as well as for data collection and analysis for the overall benefit.
