

USP Quality Review

Use Caution—Avoid Confusion

This updated resource now includes reports submitted to both USP medication error reporting programs—MEDMARXSM and the USP Medication Errors Reporting (MER) Program—from their inception through December 31, 2002. Similarity of drug names involves confusion between look-alike and/or sound-alike brand names, generic names, and brand to generic names. This confusion is compounded by illegible handwriting, lack of knowledge of drug names, newly available products, similar

packaging or labeling, and incorrect selection of a similar name from a computerized product list.

Below is a list of similar drug names reported to MEDMARX and MER. It is important to remember that these names may not sound alike as you read them or look alike in print, but when handwritten or communicated verbally, these names have caused or could cause confusion. (**Brand names are italicized and new entries are highlighted in red.**)
