

## Anhydrous Lactose

Portions of the monograph text that are national *USP* text, and are not part of the harmonized text, are marked with symbols (†) to specify this fact.

Click image to enlarge

### DEFINITION

Anhydrous Lactose is *O*-β-D-galactopyranosyl-(1→4)-β-D-glucopyranose (β-lactose), or a mixture of *O*-β-D-galactopyranosyl-(1→4)-β-D-glucopyranose and *O*-β-D-galactopyranosyl-(1→4)-α-D-glucopyranose (α-lactose).

### IDENTIFICATION

- A. [SPECTROSCOPIC IDENTIFICATION TESTS](#) ‹197›, *Infrared Spectroscopy*: 197K
- †B. [THIN-LAYER CHROMATOGRAPHIC IDENTIFICATION TEST](#) ‹201›

**Adsorbent:** 0.25-mm layer of chromatographic silica gel

**Diluent:** Methanol and water (3:2)

**Standard solution A:** 0.5 mg/mL of [USP Anhydrous Lactose RS](#) in *Diluent*

**Standard solution B:** Contains 0.5 mg/mL of [USP Dextrose RS](#), 0.5 mg/mL of [USP Anhydrous Lactose RS](#), 0.5 mg/mL of [USP Fructose RS](#), and 0.5 mg/mL of [USP Sucrose RS](#) in *Diluent*

**Sample solution:** 0.5 mg/mL of Anhydrous Lactose in *Diluent*

**Application volume:** 2 μL

**Developing solvent system:** Ethylene dichloride, glacial acetic acid, methanol, and water (10:5:3:2)

**Spray reagent:** 5 mg/mL of thymol in a mixture of alcohol and sulfuric acid (19:1)

### Analysis

**Samples:** *Standard solution A*, *Standard solution B*, and *Sample solution*

Allow the spots to dry, and develop the plate in a paper-lined chromatographic chamber equilibrated with the *Developing solvent system* for about 1 h prior to use. Allow the chromatogram to develop until the solvent front has moved about three-quarters of the length of the plate. Remove the plate from the chamber, dry in a current of warm air, and redevelop the plate in fresh *Developing solvent system*. Remove the plate from the chamber, mark the solvent front, and dry the plate in a current of warm air. Spray the plate evenly with *Spray reagent*. Heat the plate at 130° for 10 min.

**System suitability:** The test is not valid unless *Standard solution B* shows four clearly discernible spots, disregarding any spots at the origin.

**Acceptance criteria:** The principal spot from the *Sample solution* corresponds in appearance and  $R_F$  value to that from *Standard solution A*.

## OTHER COMPONENTS

### • **CONTENT OF ALPHA AND BETA ANOMERS**

**Silylation reagent:** Dimethyl sulfoxide, pyridine, and trimethylsilylimidazole (19.5: 58.5: 22)

**Standard solution:** Prepare a mixture of alpha-lactose monohydrate and beta-lactose having an anomeric ratio of about 1:1 based on the labeled anomeric contents of the alpha-lactose monohydrate and the beta-lactose. Introduce 10 mg of this mixture into a vial with a screw cap. Add 4 mL of *Silylation reagent*. Sonicate for 20 min at room temperature. Transfer 400  $\mu$ L to an injection vial. Add 1 mL of pyridine. Close the vial, and mix well.

**Sample solution:** Introduce 10 mg of Anhydrous Lactose into a vial with a screw cap. Add 4 mL of *Silylation reagent*. Sonicate for 20 min at room temperature. Transfer 400  $\mu$ L to an injection vial. Add 1 mL of pyridine. Close the vial, and mix well.

### **Chromatographic system**

(See [Chromatography \(621\)](#), [System Suitability](#).)

**Mode:** GC

**Detector:** Flame ionization

#### **Columns**

**Precolumn:**<sup>1</sup> 0.53-mm  $\times$  2-m intermediate polarity deactivated fused silica

**Analytical:**<sup>2</sup> 0.25-mm  $\times$  15-m G27 on fused silica; film thickness 0.25  $\mu$ m

#### **Temperatures**

**Detector:** 325°

**Injection port:** 275° or use cold on-column injection

**Column:** See [Table 1](#).

**Table 1**

<b>Initial Temperature (°)</b>	<b>Temperature Ramp (°/min)</b>	<b>Final Temperature (°)</b>	<b>Hold Time at Final Temperature (min)</b>
80	—	80	1
80	35	150	—
150	12	300	2

**Carrier gas:** Helium

**Flow rate:** 2.8 mL/min

**Injection volume:** 0.5  $\mu$ L

**Injection type:** Splitless or by cold on-column injection

### **System suitability**

**Sample:** *Standard solution*

### Suitability requirements

**Resolution:** NLT 3.0 between the peaks due to alpha-lactose and beta-lactose

### Analysis

**Sample:** *Sample solution*

[NOTE—The relative retention time with reference to beta-lactose is about 0.9 for alpha-lactose (retention time = about 12 min).]

Calculate the percentage content of alpha-lactose:

$$\text{Result} = S_a / (S_a + S_b) \times 100$$

$S_a$  = area of the peak due to alpha-lactose

$S_b$  = area of the peak due to beta-lactose

Calculate the percentage content of beta-lactose:

$$\text{Result} = S_b / (S_a + S_b) \times 100$$

$S_a$  = area of the peak due to alpha-lactose

$S_b$  = area of the peak due to beta-lactose

♦

### IMPURITIES

- **RESIDUE ON IGNITION** (281): NMT 0.1%

### SPECIFIC TESTS

#### • CLARITY AND COLOR OF SOLUTION

**Hydrazine sulfate solution:** Dissolve 1.0 g of hydrazine sulfate in water, and dilute to 100.0 mL. Allow to stand for 4–6 h.

**Hexamethylenetetramine solution:** In a 100-mL ground-glass stoppered flask dissolve 2.5 g of hexamethylenetetramine in 25.0 mL of water.

**Primary opalescent suspension:** To the *Hexamethylenetetramine solution* in the flask add 25.0 mL of the *Hydrazine sulfate solution*. Mix and allow to stand for 24 h. This suspension is stable for 2 months, provided it is stored in a glass container free from surface defects. The suspension must not adhere to the glass and must be well mixed before use.

**Standard opalescence:** Dilute 15.0 mL of the *Primary opalescent suspension* to 1000.0 mL with water. This suspension is freshly prepared and may be stored for up to 24 h.

**Reference suspension:** To 5.0 mL of the *Standard opalescence* add 95.0 mL of water. Mix and shake before use.

**Reference solution:** To 6.0 mL of [ferric chloride CS](#), 2.5 mL of [cobaltous chloride CS](#), and 1.0 mL of [cupric sulfate CS](#) add hydrochloric acid (10 g/L HCl) to make 1000 mL.

**Sample solution:** 1 g in 10 mL of boiling water. Allow to cool.

#### Instrumental conditions

**Mode:** Vis

**Analytical wavelength:** 400 nm

**Acceptance criteria:** NMT 0.04 for the absorbance divided by the path length in centimeters; and the clarity of the *Sample solution* is the same as that of water or its opalescence is not more pronounced

than that of the *Reference suspension*, and it is not more colored than the *Reference solution*.

- **LOSS ON DRYING** (731)

**Analysis:** Dry a sample at 80° for 2 h.

**Acceptance criteria:** NMT 0.5%

- **WATER DETERMINATION** (921), *Method I*

**Sample solution:** Anhydrous Lactose in a mixture of methanol and formamide (2:1)

**Acceptance criteria:** NMT 1.0%

**Change to read:**

- **MICROBIAL ENUMERATION TESTS** (61) and **TESTS FOR SPECIFIED MICROORGANISMS** (62): The total aerobic microbial count is NMT 10<sup>2</sup> cfu/g and <sup>▲</sup>▲ (NF 1-Dec-2024) the total combined molds and yeasts count is NMT 50 cfu/g. <sup>▲</sup>▲ (NF 1-Dec-2024) It meets the requirements of the test for absence of *Escherichia coli*.

- **PROTEIN AND LIGHT-ABSORBING IMPURITIES**

(See *Ultraviolet-Visible Spectroscopy* (857).)

**Sample solution:** 1% solution (w/v)

**Instrumental conditions**

**Mode:** UV

**Wavelength range:** 210–300 nm

**Acceptance criteria:** NMT 0.25 for the absorbance divided by the path length in centimeters at 210–220 nm; NMT 0.07 for the absorbance divided by the path length in centimeters at 270–300 nm

**Change to read:**

- **ACIDITY OR ALKALINITY**

**Sample solution:** Dissolve 6 g by heating in 25 mL of carbon dioxide-free water, cool, and add 0.3 mL of *phenolphthalein TS*.

**Acceptance criteria:** The solution is colorless, and NMT 0.4 mL of <sup>▲</sup>**0.1 N sodium hydroxide VS** <sup>▲</sup>▲ (NF 1-Dec-2024) is required to produce a pink or red color.

- **OPTICAL ROTATION** (781S), *Procedures, Specific Rotation*

**Sample solution:** Dissolve 10 g by heating in 80 mL of water to 50°. Allow to cool, and add 0.2 mL of 6 N ammonium hydroxide. Allow to stand for 30 min, and dilute with water to 100 mL.

**Acceptance criteria:** +54.4° to +55.9°, calculated on the anhydrous basis, at 20°

## ADDITIONAL REQUIREMENTS

**Change to read:**

- **PACKAGING AND STORAGE:** Preserve in tight containers. <sup>▲</sup>▲ (NF 1-Dec-2024)

**Change to read:**

- <sup>▲</sup>▲ (NF 1-Dec-2024) **LABELING:** Where the labeling indicates the relative quantities of alpha- and beta-lactose, determine compliance using *Content of Alpha and Beta Anomers*. Where the labeling states the particle size distribution, it also indicates the  $d_{10}$ ,  $d_{50}$ , and  $d_{90}$  values and the range for each. <sup>▲</sup>▲ (NF 1-Dec-2024)

**Change to read:**
