Email: [PQMplus@USP.org](mailto:PQMplus@USP.org)

This document is made possible by the generous support of the American people through the U.S. Agency for International Development (USAID) Cooperative Agreement No. AID-7200AA19CA00025. The contents are the responsibility of U.S. Pharmacopeial Convention (USP) and do not necessarily reflect the views of USAID or the United States Government.

## About PQM+

The Promoting the Quality of Medicines Plus (PQM+) Program is a five-year cooperative agreement between USAID and USP to sustainably strengthen medical product quality assurance systems in low- and middle-income countries. The program works to improve medical product quality through cross-sectoral and systems strengthening approaches and the application of international quality assurance standards across the pharmaceutical system. By sharing scientific expertise and providing technical support and leadership, PQM+ helps create resilient and robust local health systems that address diseases such as HIV/AIDS, tuberculosis, malaria, and neglected tropical diseases, as well as improve maternal, newborn, and child health.

## Acknowledgments

---

The original report (Amoxicillin Product Information Report – July 2018), from which information in this job aid was compiled, was developed in collaboration with JM Pharma (United States) and the Indian National Institute of Pharmaceutical Education and Research (NIPER). USP gratefully acknowledges the preparation of this job aid by Frederick Meadows, Senior Technical Advisor, Product Supply Management and CMC, PQM+ under the direction of Lawrence Evans, Senior Director, Technical PQM+.

USP is also grateful to the U.S. Agency for International Development (USAID), which funded this work through the Promoting the Quality of Medicines Plus (PQM+) program. Specifically, USP is thankful for the guidance and oversight provided by:

- Helen Petach, Senior MCH Science Advisor, USAID
- Alison Collins, Health Systems Advisor
- Lisa Ludeman, Senior Pharmaceutical Management Advisor
- Tobey Busch, Senior Pharmaceutical Management Advisor

## Acronyms

---

ADE	acceptable daily exposure
API	active pharmaceutical ingredients
BP	The British Pharmacopeia
BW	body weight
CTD	common technical document
EP	The European Pharmacopeia
FPP	finished pharmaceutical product
HPLC	high performance liquid chromatography
MF	modifying factor
NMR	Nuclear Magnetic Resonance
NMT	no more than
NOAEL	no observable adverse effect level
NOEL	no observable effect level
OEL	occupational exposure limit
PK	pharmacokinetic factor
POD	point of departure
PQM+	Promoting the Quality of Medicines Plus
S	steady state
USAID	U.S. Agency for International Development
USP	U.S. Pharmacopeial Convention
UF	uncertainty factor
UV	ultraviolet
V	volume

## Amoxicillin Job Aid to Assist with Dossier Preparation

This document is a job aid for quick access to information to assist with dossier preparations for amoxicillin active pharmaceutical ingredients and finished products. The information consists of facilities, equipment, safety recommendations, and analytical data for production. The information herein is adapted from the Promoting Quality Medicines Program's Amoxicillin Product Information Report (July 2018).

## Aid for CTD Module 2.3.A.1 – Facilities and Equipment

Table 1. Facilities for Processing Amoxicillin

Substance	Facility Needs
Amoxicillin	Dedicated facility preferred to avoid contamination, e.g., with penicillin

Table 2. Equipment for Formulating

Substance	Processing and Equipment
Amoxicillin trihydrate	<p><b>Dry granulation unit operations include:</b></p> <p>Mills – for milling/cutting</p> <p>Sieves – for particle size distributions</p> <p>Blenders – double-cone blender, bin blender, or octagonal blender for blending</p> <p>Roller compactor – to form compacts</p> <p>Multi-mill or oscillatory granulator – for compacts converted to granulation</p> <p>Mixers – for mixing with extra-granular excipients</p> <p>Tablet presses – for tablet compressing</p> <p>Film coater – for applying film coating</p>

## Aid for CTD Module 2.5.5 – Safety

Table 3. Safety Recommendations for Employee Exposure

Area	Exposure Limits
Occupational exposure limit (OEL) – designed to be an 8-hour a day, 40-hour a week airborne concentration	<p><math>OEL = NOEL \text{ (mg/kg/day)} \times BW \text{ (kg)} / V \text{ (m}^3\text{/day)} \times S \times UF \times MF \times \alpha</math></p> <p><math>OEL = 2450 \text{ mg/kg/day} \times 70 \text{ kg} / 10 \text{ m}^3\text{/day} \times 2 \times 900 \times 10 \times 3 = 0.317 \text{ mg/m}^3 = 320 \text{ }\mu\text{g/m}^3</math></p> <p>NOAEL = No observable adverse effect level</p> <p>UF = Uncertainty factors (6 for rat-to-human extrapolation, 10 for inter-human variation, 3 for sub-chronic to chronic extrapolation, 5 for available pre-clinical toxicity data)</p> <p>MF = Modifying factor of 10 for fatal anaphylactic reactions that may happen due to penicillin exposure</p> <p>S = Steady state based on elimination half-life = 2 <math>\alpha</math> = pharmacokinetic factor based on bioavailability = 3</p> <p>V = Volume of air breathed in a shift = 10 m<sup>3</sup></p>

Table 4. Safety Control Band Recommendations for Employee Exposure

Area	Exposure Limits
<b>Control band assignment: Category 2</b>	>0.1 to 1 mg/m <sup>3</sup> dust >5 to 50 ppm vapor Harmful on single exposure Use local exhaust ventilation
<b>Acceptable daily exposure (ADE)</b>	$ADE = (POD \text{ mg/day}) / UF_C \times MF \times PK$ $ADE = 750 \text{ mg} / 90 \times 1 \times 3 = 2.8 \text{ mg/day}$ Where: POD = Point of departure BW = Body weight (kg) $UF_C = (UF_A \times UF_H \times UF_S \times UF_E \times UF_R)$ UF <sub>A</sub> = Interspecies UF <sub>H</sub> = Intraspecies variability UF <sub>S</sub> = Length of study UF <sub>E</sub> = Severity of effect UF <sub>R</sub> = Reference effect level MF = Modifying factor PK = Pharmacokinetic factor

## Aid for CTD Module 3.2.S – Analytical Data for APIs
