

Subject: USP Certificates

Dear Valued USP Customer:

The United States Pharmacopeial Convention, Inc. (USP) does not provide Certificates of Analysis for USP Reference Standards. This is done for scientific and legal reasons. USP does provide USP Certificates for most USP Reference Standards (RS). USP Certificates are issued to provide customers with information on the Reference Standard label text, molecular information, typical chromatograms (limited cases), and additional use/handling information that may not be contained on the Reference Standard label.

USP Reference Standards are intended only for Test and Assay Use in their associated USP compendial applications. If a value is not provided on the label and the specific item has a quantitative USP compendial application, a value of 100.0% can be assumed. This applies only to USP Reference Standards intended for quantitative use in USP compendial procedures. Those intended only for qualitative use are not assigned a purity value. Please refer to the specific Reference Standard label for further information.

Please note, as indicated above, USP Reference Standards are intended for use in the official methods found in the current *USP compendia*. Determination of the appropriateness of USP Reference Standards for non-official use is the responsibility of the user. USP Reference Standards are not intended for administration to humans or animals as drugs or medical devices. Please refer to *General Chapter <11> USP Reference Standards* in the current version of the USP-NF for further information.
